Section A - Parts Ordering

GENERAL

This publication, which contains an illustrated parts breakdown, has been prepared as an aid in locating those parts which may be required in the maintenance of the unit. Always insist on genuine Ingersoll Rand branded parts for your unit.

Doosan Infracore Portable Power can bear no responsibility for injury or damages resulting directly from the use of non-approved repair parts.

Portable Power service facilities and Ingersoll Rand parts are available worldwide. Consult local yellow pages or visit: www.doosanportablepower.com.

Special order parts may not be included in this manual. Contact the Portable Power Parts Department with the unit serial number for assistance with these special parts.

Description

The illustrated parts breakdown illustrates and lists the various assemblies, subassemblies and detailed parts which make up this particular machine. This covers the standard models and the more popular options that are available.

In referring to the rear, the front or to either side of the unit, always consider the drawbar end of the unit as the front.

Standing at the rear of the unit facing the drawbar (front) will determine the right and left sides.

Fasteners

Both SAE/inch and ISO/metric hardware have been used in the design and assembly of these units. In the disassembly and reassembly of parts, extreme care must be taken to avoid damaging threads by the use of wrong fasteners.

How To Order

Always specify the model and serial number of the unit.

Specify the part number and description.

This exploded view diagram illustrates the assembly of the Pioneer 2-DXII turntable. The components are labeled with letters in circles, corresponding to the parts list on the right. The diagram shows the turntable (L) being mounted onto a base plate (G) using screws (M, Q). The base plate is secured to a metal frame (R) with screws (H). The turntable's internal mechanism, including the motor (F), is shown in relation to the base plate. The motor is connected to a power source (A) via a cable (B) and a connector (C). The motor is also connected to a control unit (D) via a cable (E). The control unit is connected to a power source (A) via a cable (B) and a connector (C). The control unit is also connected to a power source (A) via a cable (B) and a connector (C). The control unit is also connected to a power source (A) via a cable (B) and a connector (C).
