Tips for Handling and Storing Filters

Whether you are storing filters in your shop or warehouse, it's always important to practice good storage and handling techniques.

Here are a few tips to keep your filters in good condition:

- Make sure the filter is clean, unused and free of damage before selling or installing.
- Never store a filter without it being in a box or completely sealed.
- To prevent damage to filters, don't throw in the back of a truck, or in any other area where damage could occur.
- Be sure to keep filters in original packaging if storing on metal shelves. Over time, this will help to prevent rusting.
- Make sure labels with product information and dates are visible to all personnel pulling from shelves.
