

NEW SERVICE LITERATURE FORMAT UPDATE Mocksville Built Portable Products

The Portable Compressor Division introduced a new service literature package one year ago on new products. Existing products have also been updated with total completion expected during the 1st quarter of 1996.

What to expect:

The Engine Operation and Maintenance literature is included within the Ingersoll-Rand Operation, Maintenance and Parts Manual.

The Engine Parts Manual and distributor directory is not included with the literature set. They are available direct from the engine manufacturer through their dealers or via a mail in order form in the Engine Section of the IR Manual.

IR Warranty Registration Form is included in the IR Manual as a separate page.

The EPA Maintenance Log is incorporated as a section of the IR Manual.

IR Warranty Policy is stated in the IR Manual.

The only exception to this is the Caterpillar and Kubota powered units. There will be a separate Engine Operator Manual with the IR Manual for these units, but the respective parts manual and directory will not be included.

We believe this new concept provides the best means of communicating machine information by consolidating it into one publication that covers package and engine. Detail parts information on the engines is always available from the engine manufacturer when an engine serial number is provided.
